Strengthening international law to address the needs of legally pluralist nations

Dr Erika J Techera
Macquarie University, Centre for Environmental Law, Sydney, Australia

There is little doubt that in recent decades Indigenous people have obtained a greater voice at the international level and the recognition of Indigenous rights in international treaties. In particular international law has provided the tools for Indigenous peoples to demand recognition of customary law. But it has not assisted legally pluralist nations in the challenging task of reconciling custom and state-based legislation. Greater engagement by the international community with the issue of legal pluralism is an essential step in facilitating the effective implementation of international environmental law at the domestic level. This paper will consider the greater role that the international community and inter-governmental organisations can play in assisting legally pluralist nations. The particular focus will be small island developing states of the South Pacific region in the context of the implementation of international environmental law.

I. INTRODUCTION

In the last two decades Indigenous peoples have obtained a greater ‘voice’ at the international level firstly through bodies such as the Working Group on Indigenous People and later the UN Permanent Forum on Indigenous Issues (UNPFII). At the same time, international laws have established the rights of Indigenous people and drawn attention to their importance in environmental governance. Most significant is the Declaration on the Rights of Indigenous People (DRIP) which achieved broad consensus when it was adopted in 2007. Whilst a number of these international law instruments make specific reference to ‘custom’ and ‘customary law’, this is often in the context of civil and political rights or the growing field of Indigenous collective rights. These
areas do not directly address the often complex issues involved in implementing law and policy in countries where multiple legal orders operate. In particular conflicts between human rights and many customary regimes remain a significant issue. It is clear that international law plays an important part in establishing norms and standards that inform national law and policy; however, it has failed to effectively address many of the specific needs of legally pluralist nations.

Turning to the development of environmental law, it can be seen that there has been a rapid expansion in international law in this area. A plethora of treaties, protocols and soft law instruments now deal with environmental issues. Furthermore, it has now been almost universally accepted that development must be undertaken sustainably: in a way that meets the needs of the present without compromising the ability of future generations to meet their needs. However, the optimum legal mechanisms that will facilitate sustainable development remain unclear. At the national level, in many post-colonial legally pluralist states, centralised approaches have been taken by various governments with limited success and it is in this context that new approaches have been sought. Attention has turned to local communities for a number of reasons: growing international recognition of human and Indigenous collective rights; key principles of sustainable development supporting localised approaches; growing awareness of traditional natural resource management mechanisms incorporating traditional knowledge and customary laws; and in the context of the South Pacific, the continued adherence to customary law by Indigenous peoples.

The combination of the legally pluralist context and rapid development of international environmental law has challenged the small island developing states (SIDS) of the South Pacific. For example, identifying how international norms can be implemented effectively at the domestic level in ways which
do not conflict with deeply held customary norms. In many SIDS the majority of Indigenous People continue to live at least a partially traditional lifestyle that fits uneasily with western legislative models. At the same time these countries are poorly resourced and often lack technical expertise to draft complex legislation that implements international obligations as well as addressing local custom. This is particularly problematic in the context of the development of national and implementation of international environmental law. In developing legal frameworks to achieve enhanced and enduring environmental outcomes the issue of the functional recognition of customary law cannot be ignored. Good environmental governance indicates a role for both ‘top-down’ and ‘bottom-up’ regulatory approaches. This is true at the national level but equally so at the international level. The purpose and focus of this paper is to examine the greater role that international law could play in assisting SIDS to implement environmental regulations in a pluralist context.

This paper will consider the international law and international environmental law instruments that address the recognition of customary law and legal institutions in this context. The roles of relevant international actors and institutions will be examined in order to identify the strengths and weaknesses. The way forward will be explored and suggestions made as to how international law could better address the needs of the South Pacific island nations. In particular consideration will be given to the greater role an international or regional body could play in providing guidance and sharing best practice in relation to the recognition of customary law and the development of domestic environmental law.

II. CONTEXTUAL BACKGROUND

Before moving to a consideration of international law and Indigenous peoples the particular South Pacific context must be explored. The focus of this paper is the SIDS of the South Pacific. Although it is somewhat dangerous to make generalisations it is clear that there are many commonalities
between these countries. Each has a long history of Indigenous occupation. The pattern of settlement of the islands is interlinked and although the cultures are anthropologically diverse some attributes are shared. In addition, each of the countries lies in similar positions along the ‘spectrum of development’ in that they are all developing countries, although in differing economic positions. These countries are themselves small, but are also composed of a number of small islands. And their disadvantageous position in terms of their opportunities for development has been acknowledged – again their small size, lack of prospects for achieving economies of scale and narrow resource base. Furthermore, each state currently faces similar social, economic and environmental concerns including large and rapidly growing Indigenous populations (following a period of outward migration), urbanisation, limited land and financial resources, environmental fragility and the desire for economic development. They each face similar internal environmental threats, although to differing degrees. These include, for example, climate change, over exploitation of natural resources, pollution from mining and agriculture and urbanisation.

Each of the South Pacific Island nations has a rich cultural history. The close cultural relationship that Indigenous people of the South Pacific have with nature and marine living resources is well established and will not be explored again here. In summary, over time the Indigenous peoples have developed beliefs which place much greater value and trust in, wildlife resources. Their motivation in managing wildlife has come from a cultural and spiritual connection with nature which places stewardship obligations upon the

---

4 Barbados Programme of Action for the Sustainable Development of Small Island Developing States, Preamble paras 4 and 8.
people as well as the right to take and use those resources for subsistence needs. These Indigenous peoples developed traditional governance mechanisms and practices involving customary law and institutions. More recently the majority have had a period of colonial rule where the customary law was subordinated to an introduced western legal system. The majority of these states are now independent but in none has the western legal system been abandoned. This has resulted in a situation of legal pluralism.

The study of legal pluralism has gained increasing attention in the last 30 years, firstly from legal anthropologists and more recently from lawyers. A detailed consideration of this literature cannot be undertaken here and has been dealt with by a number of commentators. In short, as stated by Hertogh, legal pluralism involves two ideas: firstly that more than one legal order exists within the same territory; and secondly that sources of law can derive otherwise than from the state. There is little doubt that many of the countries in the South Pacific are legally pluralist in the sense that both customary and introduced law operate. This situation arose as a result of European exploration, settlement and colonisation when colonial governments brought with them their own legal systems. This is what Sally Engle Merry refers to as ‘classic legal pluralism’ being a dual system created as a consequence of colonial rule. The result is that these countries face similar challenges in developing law and policy that meets international

---

7 Of course there are other types of pluralism in these societies such as in the area of scientific knowledge (western science and Traditional Ecological Knowledge (TEK)), political and governance structures and their institutions. But in this paper the focus will be limited only to issues associated with legal pluralism.
8 For example, F von Benda-Beckmann, J Griffiths, A Griffiths, S E Merry, M Davies and M Forsyth.
11 Merry, ‘Legal Pluralism’, above n 9, 872
obligations but also has the acceptance of local communities and does not conflict with ingrained customary norms. In analysing these tensions three possible positions have emerged in relation to customary law: firstly, full recognition of pre-existing customary law with incorporation into the legal system at the national level and the support of the national government; secondly, no recognition and no status given to customary law; and thirdly, a hybrid whereby the constitutional framework provides the facility to incorporate customary law into the national legal system but it is not mandatory to do so, nor has it been done uniformly. It has been said that at the time of independence true legal pluralism was envisaged - but the reality is that in the majority of these states there exists a form of ‘stratified dualism’.12

Whilst customary law is a constitutional source of law in many cases13 there remains a tension between the dominant legal system and customary law. Rather than support each other these laws are often in conflict or operate uneasily in tandem, with each operating semi-autonomously in their own fields. State-based dominant legal systems have tended to marginalise customary law and in many cases continue to do so.

In the context of these post-colonial states, several different themes have emerged from the literature: firstly, the idea and relevance of legal pluralism;14 secondly, the difficulties involved in defining customary law;15 and thirdly, the bases upon which customary law may be reconciled with the dominant legal system.16

---

13 For example, Samoa and Vanuatu.
16 Forsyth, above n 9.
Just as legal pluralism cannot be considered in detail here, this is not the place for a debate about what is and is not customary law and the difficulties if proving it. However, it is acknowledged these issues remain problematic. In this paper it has been assumed that the SIDS of the South Pacific are, since independence, all legally pluralist with the majority of the Indigenous population leading at least a partially traditional lifestyle. Nonetheless each of these countries is challenged by legal pluralism and particularly for those with large Indigenous populations, new law that is introduced is unlikely to be successful where it conflicts with deeply ingrained customary norms. Furthermore, to ignore traditional legal orders is contrary to existing international human rights law and collective Indigenous rights. These latter two areas are considered in detail below.

III. Indigenous People in International Law

Historically, international law has been the domain of states, and Indigenous peoples have had little or no voice at the global level. However, with the establishment of the United Nations Working Group on Indigenous Populations (WGIP) in the 1980s, the interest generated following the International Year of the World’s Indigenous People in 1993 and the Decade of the World’s Indigenous People, increasing attention has been given to these non-state actors. In 2000 the UN Permanent Forum on Indigenous Issues (UNPFII) was created by the UN Economic and Social Council (ECOSOC), and it has now become apparent that Indigenous peoples have an emerging legal personality in the international arena.

---

20 Evidenced by their ‘direct access to aid programs’ and their greater role in UN decision making, such as their participation in working group meetings and their recognition as a ‘major group’ at the Rio Summit: Barsch, above n 18, 33–4, 58.
Much of the terminology used throughout international law and policy documents remains undefined and contentious. For example, there is no agreed definition of ‘Indigenous peoples’, and alternatives used in various international law instruments include ‘aborigines’, ‘tribal peoples’ and ‘Indigenous populations’. In some circumstances, ‘indigenous’ is contrasted with ‘minorities’; in other cases, with ‘local’ or ‘traditional’. Further controversy surrounds the use of the word ‘peoples’ as opposed to ‘people’. An in-depth discussion of the problematic debate over terminology is beyond the scope of this paper, and the issue has been dealt with extensively in the literature. However, it is clear that there are no agreed international law definitions. ‘Indigenous peoples’ is used here to mean a culturally distinct group of people, self-defined and traditionally regarded as descended from the original inhabitants of lands with which they maintain a strong bond.

At the international level, some early attention was given to Indigenous peoples following incidents of genocide, appropriation of land and other atrocities committed against them. But it was the rise of legal positivism in the late 19th century that resulted in the focus upon state sovereignty and the ‘subjugation of Indigenous people’. However, increasingly attention has again turned to non-state actors. This can most readily be seen in human rights conventions, in the context of the rights of individuals as against the state.

---

23 Firestone, Lilley and Torres de Noronha, above n 22, 226.
The starting point for any consideration of universal human rights which assist Indigenous peoples is the United Nations (UN) Charter\textsuperscript{27} and its core concepts of equality and non-discrimination.\textsuperscript{28} Many other later conventions supported and elaborated upon these fundamental rights, including the International Covenant on Civil and Political Rights (ICCPR)\textsuperscript{29} and the International Covenant on Economic, Social and Cultural Rights (ICESCR)\textsuperscript{30} which prohibit discrimination and provide that all people are equal before the law and entitled to its equal protection.\textsuperscript{31} Much of the work in this area relates to Indigenous peoples and land rights; for example, the Convention on the Elimination of All Forms of Racial Discrimination (ICERD)\textsuperscript{32} provides for participation and ownership of property but does not specifically mention Indigenous peoples.\textsuperscript{33} In particular, the Committee on the Elimination of Racial Discrimination (CERD) continues to interpret the ‘fundamental human rights norm of non-discrimination in favor of indigenous peoples’.\textsuperscript{34}

However, whilst most independent post-colonial societies and, indeed, western countries too may now prohibit discrimination\textsuperscript{35} and support equality, it is the right to self-determination which many Indigenous people want: to

\textsuperscript{27}Charter of the United Nations, opened for signature 26 June 1945, UNTS 993 (entered into force 24 October 1945).
\textsuperscript{29}International Covenant on Civil and Political Rights, opened for signature 16 December 1966, 6 ILM 368 (entered into force 23 March 1976).
\textsuperscript{33}Ibid art 5(e)(vi), which refers to the ‘right to equal participation in cultural activities’; art 5(d)(v): ‘The right to own property alone as well as in association with others’.
\textsuperscript{35}There are notable exceptions to this, for example the Cook Islands, which has reserved the right not to apply the principles contained in the Convention on the Elimination of Discrimination Against Women: Charters, above n 25, 37.
become “subjects” of international legal rights and duties rather than mere “objects” of international concern' and ‘to live as they wish without outside interference’. Article 1(2) of the UN Charter provides that its purposes include development of relationships between nations based upon respect for the principle of ‘self-determination of peoples’. However, Indigenous peoples are not specifically mentioned, and the issue of identification of Indigenous communities as ‘peoples’ is a contentious one.

The ICESCR provides that ‘[a]ll peoples have the right to self-determination’ and freedom to ‘determine their political status and ... pursue economic, social and cultural development’. Furthermore, it has been suggested that ‘this right may not extend to indigenous people already forming part of a self governing non-colonial nation’. In addition, ICESCR states that ‘[a]ll peoples may, for their own ends, freely dispose of their natural wealth and resources’ and in ‘no case may a people be deprived of its own means of subsistence’. Article 1 of the ICCPR is in similar terms, but in addition the Covenant provides that minorities ‘shall not be denied’ the right to ‘enjoy their own culture, to profess and practise their own religion, or to use their own language’. Further support for self-determination may be found in the Declaration on the Right to Development and the Vienna Declaration and Programme of Action on Human Rights. The Convention on the Rights of the Child reiterates the right, but specifically refers to Indigenous peoples in holding that a child belonging to ‘a minority or who is Indigenous’

shall not be denied the right to ‘enjoy his or her own culture, to profess and practice his or her own religion, or to use his or her own language’. More recently the Declaration on the Rights of Indigenous Peoples includes the right to self-determination in the context of sustainable development. Although this document remains soft law, it provides further and arguably stronger support in this context. However, it is not only international instruments that provide rights to self-determination. The International Court of Justice (ICJ) has also been supportive in holding that the right to self-determination is erga omnes and ‘one of the essential principles of contemporary international law’.

Precisely what self-determination encompasses is a further matter of controversy. The literature on this topic refers both to external and internal self-determination. The former includes the rights to determination of international status, political independence and secession. The latter involves the right of Indigenous peoples to determine their own destinies, including the right to self-government, and to pursue development without interference. This also includes self-management in relation to local matters and the right to participate in national governmental decision making. Many states have resisted an acceptance of the right to self-determination by Indigenous peoples, as it would also grant the right to secession. But Barsch argues that if an internally based interpretation is accepted, that encourages democratic processes without territorial and political disruption, then the aims of Indigenous peoples might be achieved with the support of the majority of states. Self-government would appear to include control

over the legal regulation of Indigenous people’s lives\textsuperscript{54} and therefore the recognition of customary law. Indeed, customary law has been considered one of the ‘fundamental features’ of Indigenous ‘culture and claims for sovereignty’.\textsuperscript{55} Unfortunately, in order to strengthen claims for self-determination, the longstanding nature of Indigenous traditions and legal systems is often emphasised, leading to the impression that customary laws are archaic and inflexible.\textsuperscript{56}

The rights of Indigenous peoples are continuing to develop under international law, and more recently a group of collective Indigenous rights have emerged. These rights afford further bases for the recognition of traditional laws and practices. However, the argument that universal human rights support the recognition of customary law presents some difficulties in circumstances where they conflict. Customary laws can inhibit the realisation of human rights.\textsuperscript{57} In the context of the South Pacific this can be illustrated in relation to women’s and children’s rights. Most Indigenous cultures in the South Pacific have historically been patriarchal. Women do not have specific rights to, for example, own land or become tribal leaders. Therefore, fundamental human rights providing protections against discrimination in favour of equality conflict with customary laws. This can also be seen in the area of marriage and the family.\textsuperscript{58} This is compounded by the fact that most Indigenous law focuses upon communal rights at the expense of any individual ones.\textsuperscript{59} These issues result in increased tension between customary laws and state-based laws that seek to implement international human rights law.

\begin{flushright}
\textsuperscript{56} Ibid.
\textsuperscript{58} Ibid 86.
\textsuperscript{59} Ibid 22.
\end{flushright}
These tensions have led to the emergence of a group of collective Indigenous rights which, whilst including some universal human rights, also incorporate rights specific to traditional communities. The first convention to deal exclusively with the rights of Indigenous peoples was the International Labour Organisation (ILO) Convention 107 Concerning Protection and Integration of Indigenous and Other Tribal and Semi-Tribal Populations in Independent Countries (ILO 107). Whilst this convention is important for drawing attention to Indigenous issues, it has been criticised for taking an assimilation and integrationist approach. Although it remains in force, it has largely been superseded by the ILO Convention 169 Concerning Indigenous and Tribal Peoples in Independent Countries (ILO 169). ILO 169 is significant as it is binding law that specifically provides for collective Indigenous rights. It refers to a wide range of rights including protection and respect for Indigenous peoples' social, cultural, religious and spiritual values and practices, consultation and participation in decision making and control over development that affects them. It recognises the cultural and spiritual values Indigenous peoples place on land, and the right to own and possess traditional lands. Of particular significance is the inclusion of rights in relation to customs and customary law. Article 8(1) provides that in 'applying national laws and regulations to the peoples concerned, due regard shall be had to their customs or customary laws'. Furthermore, Indigenous peoples

have the right to retain their own customs and institutions\textsuperscript{71} and are to be provided with the means to protect their rights through legal proceedings.\textsuperscript{72} Whilst it does not mention self-determination, self-government or autonomy, its drafting is perhaps reflective of a desire to gain maximum international support and ratifications.\textsuperscript{73}

Although this convention has also received some criticism for its lack of reference to self-determination,\textsuperscript{74} it has focused international attention and arguably led to an emerging international consensus on the content of Indigenous rights.\textsuperscript{75} ILO 169 was drafted contemporaneously with the Declaration on the Rights of Indigenous Peoples\textsuperscript{76} (DRIP). As a declaration, the DRIP is non-binding and ultimately was not signed by key western nations with significant Indigenous populations.\textsuperscript{77} However, it has a significant standard-setting role and has achieved a certain level of international agreement which goes to the establishment of customary international law.\textsuperscript{78} Article 3 provides a clear right to Indigenous self-determination which includes the right to pursue economic, social and cultural development. The DRIP goes beyond the right of self-determination in support of collective Indigenous rights.\textsuperscript{79} Article 11 provides that ‘Indigenous peoples have the right to practise and revitalize their cultural traditions and customs’ and to seek redress for ‘property taken without their free, prior and informed consent

\textsuperscript{71} Ibid art 8(2), although this is qualified in that they must not be incompatible with national and fundamental human rights.

\textsuperscript{74} Charters, above n 25, 29.
\textsuperscript{76} Articles 5, 11, 27, 34, adopted 13 September 2007. DRIP was drafted by the Working Group on Indigenous Populations (WGIP), which is the longest-standing UN body that deals exclusively with Indigenous people. The other key UN body is the Permanent Forum on Indigenous Issues (UNPFII), which was established in 2000 by the UN Economic and Social Council. The UNPFII is significant in that it includes non-state actor representatives, including Indigenous people.
\textsuperscript{77} The USA, Canada, Australia and New Zealand did not sign the Declaration. Although on 3 April 2009 the Australian government indicated formal support for DRIP.
\textsuperscript{78} Charters, above n 25, 34.
or in violation of their laws, traditions and customs’. It is clear that some of these provisions are already incorporated into ‘hard law’ human rights treaties or have become international customary law and jus cogens. However, most significantly, the DRIP also specifically provides that due recognition shall be given to ‘indigenous peoples’ laws, traditions, customs and land tenure systems’.80

It has been shown that international law provides Indigenous peoples with a framework for asserting collective and individual rights. In particular, collective Indigenous rights are receiving greater attention and may provide an effective catalyst for greater unification and integration of human rights and sustainable development considerations as they relate to Indigenous peoples.81 However, this group of rights remains contentious and arguably without international consensus,82 being described by some as having a ‘blurry boundary’.83 Nevertheless, other commentators believe that at least some Indigenous peoples’ rights are now part of customary international law.84 Barsch considers that ‘rights to land and natural resources, cultural integrity, environmental security, and control over their own development’ form part of this group.85 Rights in relation to customary law are notably absent from this list. Of particular concern, in the context of this paper, is that there are no specific references to the different domestic circumstances in which these rights might be asserted nor are the challenges faced by legally pluralist states dealt with.

### IV. INTERNATIONAL ENVIRONMENTAL LAW AND SUSTAINABLE DEVELOPMENT

80 Ibid art 27.
81 Craig, above n 73, 4.
82 Although Barsch states that a consensus had developed by 1989 that Indigenous peoples did have collective rights. He notes the speech by the Secretary-General at the opening ceremony for the International Year of the World’s Indigenous People, referring to the need for ‘balancing of individual rights and community rights’: Barsch, above n 18, 43–4.
83 Firestone, Lilley and Torres de Noronha, above n 22, 240.
85 Barsch, above n 18, 43–4.
Beyond the specific treaties and international instruments that purport to confer Indigenous rights there are various other international law instruments which refer to the rights of Indigenous peoples. Many relate to sustainable development and natural resource management. In addition to international human rights law and international law in general, international environmental law (IEL) has also provided important rights and tools for Indigenous peoples. Of course several early international environmental law instruments recognised Indigenous traditional hunting and fishing rights. But with the emergence of the sustainable development (SD) paradigm there has been a greater focus on public participation and the particular role of Indigenous peoples.

An analysis of the interaction between Indigenous peoples and SD commences at the definitional stage. Clearly western concepts of what SD means are largely irrelevant to Indigenous peoples who have a much closer relationship with nature. Their definition of SD reflects this relationship and is deeply rooted in culture.

International SD instruments support not only decentralisation but specifically the involvement of Indigenous peoples, tribal peoples and local communities. It has also been noted that Indigenous peoples were disappointed with UNCED and ‘felt like bystanders in a global negotiation over the future of their resources’. Nonetheless the Rio Declaration draws direct attention to the involvement of Indigenous peoples:

---

86 For example, the Polar Bear Agreement and the International Convention on the Regulation of Whaling.
88 Ibid 505, in which reference is made to the ease with which Indigenous peoples understand the concept: needs being met by resources or production within their geographical domain.
89 For a summary of the key instruments see Charters, above n 25, 44–6.
Indigenous people and their communities and other local communities have a vital role in environmental management and development because of their knowledge and traditional practices. States should recognize and duly support their identity, culture and interests and enable their effective participation in the achievement of sustainable development.91

Similarly, Agenda 21 devotes a whole chapter to Indigenous peoples and the need to ‘accommodate, promote and strengthen the role of Indigenous peoples and their communities’.92 Several key principles articulated in the New Delhi Declaration are particularly relevant to Indigenous peoples seeking recognition of their customary laws and greater control over natural resources. Firstly, the duty of states to ensure sustainable use of natural resources makes specific reference to Indigenous peoples:

States are under a duty to manage natural resources ... in a rational, sustainable and safe way...with particular regard for the rights of indigenous peoples, and to the conservation and sustainable use of natural resources and the protection of the environment, including ecosystems.93

A further key to the involvement of Indigenous peoples is Principle 2, relating to equity. This principle establishes the rights of all people within the current generation to participate in decision making, but also incorporates specific rights including the right to development.

Public participation is also an essential element and this is referred to in Principles 5 and 6 of the New Delhi Declaration.94 Although Indigenous peoples are not specifically mentioned within the Principles, they are referred to in the explanatory notes in the context of the right to participation as expressed in other international instruments such as the International Labour Organisation Convention No 16995 and the Declaration on the Rights of

---

94 Ibid.
Indigenous Peoples (DRIP). Furthermore, participation has been demonstrated to be essential to development itself, which is acknowledged as a key factor in poverty eradication and environmental improvement. In addition, public participation includes the involvement of other non-state actors such as NGOs. This is also important for Indigenous peoples as it is the NGOs who principally carry out community-based natural resource management work and implement SD projects.

Linked to this is the element in Principle 3 of the New Delhi Declaration, of cooperation to achieve global SD. Although considerations of Indigenous involvement tend to focus upon localised approaches it is clear that traditional societies have much to offer by way of experience and knowledge that could be of assistance more widely. By engaging with these communities best-practice approaches to SD may be identified.

Other elements of good governance are also relevant. The Johannesburg Plan of Implementation specifically noted the vital role of Indigenous people in SD and called for the ‘effective participation of indigenous and local communities in decision and policy-making concerning the use of their traditional knowledge’.

Many international environmental treaties have also referred specifically to the involvement of Indigenous peoples. For example, the Convention on Biological Diversity (CBD) provides quite clearly for the preservation and more widespread approved use of Indigenous and local community knowledge and practices related to biodiversity conservation. The UN Convention to

---

97 Mullikin, Smith and Champion, above n 345, 432.
98 Ososky, above n 2, 100.
Combat Desertification (UNCCD) similarly provides for protection, adaptation and use of traditional knowledge and technologies.101

The role of Indigenous peoples in SD gains further support from international human rights law and environmental justice principles. The relationship between human rights and environmental issues is ‘widely recognised’.102 As early as 1972 it was acknowledged that there was an inextricable link between environmental and civil and political rights.103 This gains further international support from the Draft Declaration of Principles on Human Rights and the Environment,104 which recognises the interdependence and indivisibility of human rights, environmental quality, peace and SD.105 The Declaration on the Rights of Indigenous Peoples (DRIP) specifically recognises that ‘respect for indigenous knowledge, cultures and traditional practices contributes to sustainable and equitable development and proper management of the environment’.106

International human rights law includes the elements of equality, non-discrimination, self-determination and empowerment, which intersect with many of the principles of SD. Whilst intra- and intergenerational equity are articulated in the Rio Declaration, the broad principle of eradication of

101 Convention to Combat Desertification in Those Countries Experiencing Serious Drought and/or Desertification, Particularly in Africa, opened for signature 17 June 1994, 33 ILM 1328, arts 16(g), 17(c), 18(2), 19(e) (entered into force 26 December 1996).
103 Stockholm Declaration on the Human Environment, 16 June 1972, UN Doc A/CONF.48/14 (1972). The Preamble states that ‘[b]oth aspects of man’s environment, the natural and the man-made, are essential to his well-being and to the enjoyment of basic human rights the right to life itself.’ Principle 1 states that ‘[m]an has the fundamental right to freedom, equality and adequate conditions of life, in an environment of a quality that permits a life of dignity and well-being…In this respect, policies promoting or perpetuating apartheid, racial segregation, discrimination, colonial and other forms of oppression and foreign domination stand condemned and must be eliminated.’
poverty emerged much earlier in the Charter of the United Nations.\textsuperscript{107} Intragenerational equity in terms of equality and freedom from discrimination was also dealt with early in the various human rights treaties\textsuperscript{108} as well as within the environmental justice movement. It is the specific principle of ensuring that adequate resources are available to pass on to future generations that is more recent in origin. Principle 2 of the Rio Declaration, relating to equity makes specific reference to the right to development. This human right has been defined as

\begin{quote}
    an inalienable human right by virtue of which every human person and all peoples are entitled to participate in, contribute to and enjoy economic, social, cultural and political development, in which all human rights and fundamental freedoms can be fully realized.\textsuperscript{109}
\end{quote}

This leads on to the issue of poverty, which is an impediment to both SD and environmental health but which can also lead to a breach of fundamental human rights. Principle 5 of the Rio Declaration involving public participation includes human rights elements of the right to hold and express an opinion, the right of access to information, freedom of association and issues of privacy. Access to justice is a further element of this principle and specifically mentioned in the commentary to the New Delhi Declaration.\textsuperscript{110} Non-discrimination is also a recurring theme in the Rio Declaration: in Principle 1 in relation to the use of natural resources, in Principle 2 in relation to equity and benefit sharing and in Principle 5 in relation to public participation.

\textsuperscript{107} Charter of the United Nations, opened for signature 26 June 1945, UNTS 993 (entered into force 24 October, 1945). Article 55 provides that ‘based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote: a. higher standards of living, full employment, and conditions of economic and social progress and development’. Article 56 calls upon all members to take joint and separate action to achieve this.

\textsuperscript{109} For example, the Declaration on the Right to Development, UNGA Res 41/128, UN GAOR, 53\textsuperscript{rd} Supp, 186, art 1, UN Doc A/41/53 (1986).

The foundation for these principles then lies not only in SD law and theory but also in international human rights law. As SD principles they form part of the ‘toolbox’ that Indigenous peoples may use to support their rights to broad involvement in environmental decision making and governance. From an Indigenous perspective SD, environmental ethics and human rights are therefore all interlinked.\[111\] This gains further international support from the Draft Declaration of Principles on Human Rights and the Environment,\[112\] which recognises the interdependence and indivisibility of human rights, environmental quality, peace and SD.\[113\] The Declaration on the Rights of Indigenous People (DRIP) specifically recognises that ‘respect for indigenous knowledge, cultures and traditional practices contributes to sustainable and equitable development and proper management of the environment’.\[114\] The right to self-determination is confirmed, which includes Indigenous peoples’ right to autonomy ‘in matters relating to their internal and local affairs, as well as ways and means for financing their autonomous functions’.\[115\] This would clearly include the right to develop sustainably. The right to participate in decision making is specifically articulated in Article 18.\[116\] Read together, perhaps one of the strongest articulations of Indigenous rights in relation to SD is contained in the following Articles:

Article 20
Indigenous peoples have the right to maintain and develop their political, economic and social systems or institutions, to be secure in the enjoyment of their means of subsistence and development, and to engage freely in all their traditional and other economic activities.

Article 21

\[111\] Jeffery, above n 105, 112.
\[113\] Ibid Principle 1; see also Jeffery, above n 105, 117.
\[115\] Ibid art 4.
\[116\] ‘Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own indigenous decision-making institutions.’
Indigenous peoples have the right, without discrimination, to the improvement of their economic and social conditions, including, inter alia, in the areas of education, employment, vocational training and retraining, housing, sanitation, health and social security.

Article 23
Indigenous peoples have the right to determine and develop priorities and strategies for exercising their right to development. In particular, indigenous peoples have the right to be actively involved in developing and determining health, housing and other economic and social programmes affecting them and, as far as possible, to administer such programmes through their own institutions.

Article 32
Indigenous peoples have the right to determine and develop priorities and strategies for the development or use of their lands or territories and other resources.

Whilst the DRIP remains ‘soft law’, many of its elements are incorporated into human rights treaties, discussed above, and others are broadly accepted and have become, or are in the process of becoming, international customary law. Environmental justice and SD are also inextricably linked.\(^{117}\) Social equity and environmental quality are essential elements of environmental justice and are also key principles of SD. However, as noted by Ruhl, environmental justice is a narrower concept than SD,\(^ {118}\) requiring that these two issues dominate all others,\(^ {119}\) whereas SD requires the balancing of triple bottom line goals. However, critics of SD take issue with the emphasis on development and argue that it is not a panacea for poverty and environmental degradation.\(^ {120}\) Nonetheless, it is the more adaptive concept of SD which has achieved widespread acceptance and therefore has overtaken environmental justice as the paradigm of choice.\(^ {121}\) Yet principles of environmental justice are important and continue to inform the SD literature.\(^ {122}\) They provide further support for Indigenous peoples seeking

\(^{119}\) Ibid 178.

\(^{121}\) Ruhl, above n 117, 165–6. Ruhl provides evidence of this by drawing attention to the lack of an individual indicator of environmental justice: 181. Although arguably the Millennium Development Goals have done so.

\(^{122}\) Ibid 185.
greater autonomy, management of natural resources and recognition of 
cultural practices and customary law.

Practically speaking, Indigenous communities have much to offer in the 
achievement of SD. Maragia has extended the call for localised approaches 
by arguing that community participation combined with use of traditional 
knowledge could contribute to SD.123 Richardson greatly supports this 
approach in post-colonial rural communities with strong traditional institutions 
and laws.124 The commentators argue for re-empowerment of local 
communities125 and cooperation at the international, national and local 
levels.126

Jaksa identifies colonialist norms as one of the main causes of many 
environmental problems and calls for greater recognition of Indigenous rights, 
particularly property rights, as crucial to the achievement of SD.127 He sees 
multiple benefits of such an approach: effective Indigenous property rights 
would ensure large land areas and natural resources are isolated from 
appropriation by others; they would also promote Indigenous stewardship of 
land involving a diversity of cultural ecological expertise; in addition, they 
would assist more broadly in the maintenance of Indigenous cultures.128 
Furthermore, ‘a healthy indigenous land base is crucial to the survival of 
in indigenous peoples themselves’.129 It is well known that Indigenous peoples 
have a strong connection with land and that this relationship is both spiritual 
and practical in circumstances where many rely heavily upon that land for 
subsistence needs. Whilst existing human rights might assist Indigenous

peoples in obtaining ownership of traditional lands, there is a need to ensure
that ownership is based upon traditional Indigenous land laws (generally
communal) and not western conceptions of private property rights.\textsuperscript{130}

Localised approaches to SD also require community-based economic
development strategies, tools and methodologies to be developed that rely
less upon centralised infrastructure and investment.\textsuperscript{131} In the context of
Indigenous communities, these include identifying sustainable livelihood
options such as the development of small enterprises, microfinance schemes
and provision of other financial incentives.\textsuperscript{132} Equally important is the need to
identify legal mechanisms to support localised approaches to SD to facilitate
their resourcing, longevity and legitimacy. In recent years a number of
commentators have focused upon customary laws to provide such a
foundation.\textsuperscript{133} These decentralised approaches to SD, embraced by the
small island developing states (SIDS) of the South Pacific, must be analysed in
the context of specific strategies for sustainable management and use of
marine resources.

V INTERNATIONAL PROGRAMMES OF ACTION

The reason for focussing so heavily on sustainable development is that it is in
this context that the international community has engaged the most with the
issues facing legally pluralist states. However as will be shown, this has only
been to a limited extent.

\textsuperscript{130} Ibid. Jaksa calls for the adoption of binding international agreements directly addressing Indigenous property
rights: 163.

Effectiveness of International Law: Sustainable Development in the South Pacific Region’ (1999) 12
\textit{Georgetown International Environmental Law Review} 125; P Orebech et al (eds), \textit{The Role of Customary Law
The first Global Conference on the Sustainable Development of Small Island Developing States was held in 1994. The Conference resulted in the Declaration of Barbados and the Programme of Action for the Sustainable Development of Small Island Developing States (BPOA). The Declaration acknowledges that the ‘international community has a responsibility to facilitate the efforts of small island developing states to minimize the stress on their fragile ecosystems, including through cooperative action and partnership.’ Furthermore, it was acknowledged that ‘the efforts of small island developing states to conserve, protect and restore their ecosystems deserve international cooperation and partnership.’ The Declaration of Barbados specifically noted that SIDS institutional and administrative capacity to implement the programme of action must be strengthened at all levels by supportive partnerships and cooperation, including technical assistance, the further development of legislation and mechanisms for information sharing.

The BPOA identified 14 priority areas and set out actions under each, divided into those to be undertaken at each level by a tripartite partnership involving the international community, regional bodies and the state. In addition the special role of non-governmental organisations (NGOs) and major groups was also acknowledged. Of particular significance, in terms of regional action is paragraph 52 (B) (v) which refers to the preparation of [draft model environmental provisions as a guide for countries, leaving to each small island developing State the incorporation of country-specific provisions to reflect the variety and diversity of national and customary laws and procedures, and encourage, where appropriate, the harmonization of environmental legislation and policies within and among small island developing States with a view to ensuring a high degree of environmental protection.

135 Declaration of Barbados Part Two Article III(2).

138 Climate change and sea level rise; Natural and environmental disasters; Management of wastes; Coastal and marine resources; Freshwater resources; Land resources; Energy resources; Tourism resources; Biodiversity resources; National institutions and administrative capacity; Regional institutions and technical cooperation; Transport and communication; Science and technology; Human resource development; as well as Implementation, monitoring and review.
And at the regional level efforts should be made to harmonise environmental law amongst the SIDS. In addition reference is made to the preparation of environmental law training manuals, workshops on environmental law subjects and dissemination of legal information about international environmental instruments. At the international level it was stated that support should be given to ‘environmental law offices, within regional and sub-regional organizations to implement regional approaches’ as well as strengthening regional bodies and improving coordination with regional/sub-regional bodies. Furthermore, the BPOA provides that

New legislation should be developed and existing legislation revised, where appropriate, to support sustainable development, incorporating customary and traditional legal principles where appropriate, backed up with training and adequate resources for enforcement.

At the international level the focus is upon the importance of international and regional programmes to develop and implement national environmental legislation and upon strengthening capacity to participate in the development of new agreements, training in all aspects of environmental law and initiating implementation of international agreements.

Various Progress Reports were submitted (BPOA+5) in each of the key priority areas and it was clear that significant work had been done including action in the South Pacific by SPREP and other bodies. Later at the International Meeting to Review the Implementation of the Programme of Action for the

Sustainable Development of Small Island Developing States, the Mauritius Declaration\textsuperscript{150} and Mauritius Strategy (MSI) were adopted.\textsuperscript{151} The Mauritius Declaration largely reaffirms the Barbados Declaration. The MSI follows a similar format to the BPOA by identifying priority areas. However, it adds to the earlier document by including new categories such as ‘culture’ and ‘knowledge management’. No additional references were made to customary law although the Preamble refers generally to the importance of culture including custom. Subsequently, the UN General Assembly adopted Resolution 59/311\textsuperscript{152} setting out the role of UN agencies in the implementation of the MSI. It remains to be seen what further progress has been achieved.\textsuperscript{153}

The Second International Decade of the World’s Indigenous People 2006-2015\textsuperscript{154} perhaps also signifies a missed opportunity for a renewed international agenda in this area. The five objectives of the Decade included promoting non-discrimination; promoting the participation of Indigenous people in decision making; redefining development policies that are inequitable or culturally inappropriate; adopting polices, programmes and budgets for the development of Indigenous peoples and developing strong monitoring mechanisms. However, the associated Programme of Action included no reference to legal pluralism. Although under the heading of ‘Education’ it was recommended that organisations of Indigenous peoples should create ‘documentation centres, archives, in situ museums and schools of living traditions concerning indigenous peoples, their cultures, laws, beliefs and values, with material that could be used to inform and educate non-indigenous people on those matters.’\textsuperscript{155} Furthermore, under ‘Human Rights’ there was a recommendation that national governments ‘should consider integrating traditional systems of justice into national legislations in conformity

with international human rights law and international standards of justice.’ 156 But no part of the programme addressed the issue of how this could be done. The Addendum did include one recommendation by the Office of the United Nations High Commissioner for Human Rights – the holding of ‘at least one annual action-oriented expert seminar on issues which adversely affect or may adversely affect the situation of indigenous peoples in plural societies.’ 157 However, it is unclear whether this has been done.

VI. ADDRESSING THE CHALLENGES

As can be seen from the above analysis, international law has largely failed to engage with the issue of legal pluralism and the means by which customary law could be reconciled with state-based environmental legislation. There is no doubt that international law has established human rights regimes that facilitate the recognition of Indigenous collective rights. Specific international treaties (such as ILO 169) have also acknowledged the importance of recognising customary law. And particular treaties (such as the CBD) have identified a role for traditional knowledge, practices and laws. But there has been little further international action engaging with what is a significant issue for many states in the South Pacific region.

The question is then why should the international community engage with this issue? Arguably for several reasons. Firstly, many of the dominant states within the international arena are the ones that are responsible for the current legally pluralist situation which arose due to European exploration and colonization. Secondly, many environmental problems remain global with environmental damage often caused by dominant nations and transnational corporations cutting across national boundaries. Thirdly, international law and institutions have been recognised as being able to play powerful initiating and facilitative roles. And finally because in the current globalised world it is

156 See para 52
157 See a(6)
necessary to put in place mechanisms to harmonise law and avoid fragmentation wherever possible.

So what is the way forward? Three substantive suggestions are made in relation to areas where international action can be focused upon better addressing the needs of legally pluralist nations. These include a greater role for international agencies, a new research agenda and the scaling up of international programmes.

It is clear that many international institutions are already undertaking important work in assisting Indigenous peoples, SIDS and localised approaches to conservation. However, it is essential to ensure that Indigenous people themselves fully participate at the international level. Only then will Indigenous perspectives become better understood at the international level and be considered ‘within’ rather than outside of the international arena. This would also ensure that Indigenous issues are canvassed and addressed at the time new law and policy is developed and that Indigenous peoples influence the development of emerging international environmental law norms; Indigenous people would also have the opportunity to participate directly at the global level and then have greater opportunities to put into practice domestically what they have learnt in the international forum. Ensuring this approach would then lead to the diffusion and transformation of international norms and ensure the continued development of ways to implement them.

At present, it is clear that there are a multitude of agencies working at the international and regional level. IGOs include UNEP, UNDP, AOSIS and UNESCO. The UN Division for Sustainable Development (DSD) has a number of

---

158 Including UNEP SIDS Unit SIDS Unit set up in 1995
areas of work: University Consortium of Small Island States\textsuperscript{159} which works to build the capacity of graduate education institutions; and SIDSNet.\textsuperscript{160} It is also clear that a great deal of work has been done to implement the BPOA\textsuperscript{161} at the regional level.\textsuperscript{162} Of particular significance it was also reported that SPREP had commenced ‘an assessment of environmental legislation in several Pacific Island countries, in collaboration with UNEP.’\textsuperscript{163}

Two inferences can be drawn from this: Firstly, the sheer number of agencies and institutions undertaking relevant work has led, or is likely to lead, to fragmentation. Whilst SPREP has to a certain extent undertaken a coordinating role in the South Pacific region, it is clear that this is a monumental task. Secondly, the work undertaken at the international and regional level has not directly engaged with the issue of legal pluralism. International law institutions could play an important part in developing a framework to guide law and policy-makers on the implementation of international law in pluralist nations. Which agency or body would take on this role is unclear. In one sense the UNPFII is best placed to engage with specific

\textsuperscript{159} Involving the University of Malta; the University of Mauritius; the University of South Pacific; the University of Virgin Islands; and the University of West Indies.

\textsuperscript{160} The Small Islands Developing States Network (SIDSNet) was first established in 1997 as a direct follow-up to the BPOA. The mission of SIDS Net was to support the sustainable development of SIDS through enhanced information and communication technology.

\textsuperscript{161} For example, it was reported that

Pacific island countries have developed a well organized structure of eight regional intergovernmental organizations, each with a particular focus funded by member contributions: the Forum Fisheries Agency, the Forum Secretariat, the Pacific Islands Development Programme, the South Pacific Commission, the South Pacific Regional Environment Programme, the South Pacific Geoscience Commission, the Tourism Commission of the South Pacific and the University of the South Pacific. In order to avoid duplication and harmonize their activities, the above organizations have established the South Pacific Organizations Coordinating Committee (SPOCC), a key function of which is to coordinate regional programmes. In 1995, an agreement was reached to establish the South Pacific Regional Environment Programme (SPREP), which was formerly part of the South Pacific Forum as an independent intergovernmental organization providing cooperation and assistance for the protection and improvement of the environment in the South Pacific.

\textsuperscript{162} ESCAP held a ministerial conference in 1995 on environment and development and in collaboration with SPREP, it developed a mechanism for the effective monitoring of the implementation of the Programme of Action. In addition SPREP developed a new plan for the period 1997-2000 which identified five broad priority areas: biodiversity and natural resource conservation; climate change and integrated coastal management; waste management, pollution prevention and emergencies; environmental management planning and institutional strengthening; and environmental education, information and training.: Ibid paragraphs 6-9.

\textsuperscript{163} Ibid paragraph 18.
Indigenous issues. However, those doing the work on the ground – such as the UNDP – would have important insights into customary law ‘in action’. In terms of the South Pacific region, SPREP clearly has particular South Pacific environmental expertise and already undertakes coordination work. On the other hand it is clear that SIDS in the South Pacific share some common socio-culture, legal and environmental concerns with those, for example, in the Caribbean.

Furthermore, any such institution would be unlikely to have the resources to undertake all the work themselves. Rather the approach could involve building an inter-agency agenda (perhaps on a network basis as we heard mentioned on Monday). An inter agency agenda could, for example, be established through a task force on legal pluralism which could investigate approaches and models for the incorporation of customary law into environmental state-based legislation. If such a role were to be taken on by SPREP it would need to be better resourced and given increased impetus to address the issue of legal pluralism. However, it would also need to have a central body, in order to avoid fragmentation, which can coordinate programmes, share practices and undertake research. Such a body could facilitate exchange of information at international and regional levels and disseminate pooled data.

Another important issue is the composition of any such task force. Whilst the Declaration of Barbados recognised the need to strengthen national institutional and administrative capacity it also acknowledged ‘the importance of a partnership between governments, intergovernmental

---

164 See for example the UNDP funded Capacity 21 Project.
165 In addition SIDSNet is an important repository of information which is readily available to all stakeholders. SIDSNet was proposed as the portal to and home for the University Consortium of the Small Island States (UC-SIS), which was endorsed at the 2005 Mauritius International Meeting to Review the Programme of Action for the Sustainable Development of SIDS.
166 Declaration of Barbados Part One, Article V.
organizations and agencies, non-governmental organizations and other major groups.’

Two specific areas where such a task force would be advantageous are in the areas of greater research into legal pluralism and environmental regulation; and identification of options for reconciling customary law and state-based legislation and development of model legislative provisions.

A New Research Agenda

As noted above whilst there has been an acknowledgement that ‘customary law and legal pluralism are vital means of protecting’ traditional knowledge there has been a failure to specifically address how they might be utilised in terms of environmental legislation. It is clear that at the international level this was envisaged in the BPOA. But there appears to have been no work done that has directly engaged with the issue of implementing international environmental law in legally pluralist countries where customary law is a source of law or operates as one. Therefore, much more research needs to be undertaken in this area.

Such research could investigate legal pluralism and environmental law. Similar work has recently been undertaken in relation to legal pluralism and human rights. The International Council on Human Rights Policy has recently undertaken a research project looking at this very issue. The draft report – Plural Legal Orders and Human Rights – is an attempt to move towards a human rights framework for plural legal orders by looking at

---

167 Declaration of Barbados Part One, Article VII.
1. Human rights impacts and dilemmas associated with plural legal states; and
2. Challenges to incorporating human rights in state-based legislation

A similar research project could be undertaken in relation to legal pluralism and environmental law. It would be important for such research to involve a broad spectrum of participants both Indigenous and non-Indigenous, but also from a range of disciplines including lawyers, anthropologists, environmental scientists, and others. It would need to consider the practical issues which challenge the reconciliation of customary law and environmental regulation including those discussed over the last three days including conflicts between custom and state-based legislation; conflict between different customary laws; tenure and traditional institutional issues. Such research could also extend to the investigation of international environmental law principles that might be utilised at the international level to assist pluralist states. For example, it may be that some international law principles are directly relevant including transboundary harm and common but differentiated responsibilities which could be utilised in drafting international environmental law to further engage with this issue.\textsuperscript{170} Furthermore, particular legislative provisions and concepts may be relevant – for example, from international freshwater law, conflict provisions such as a community of interests and equitable utilisation may well be transferable from the international to the local level.

**Strengthening the implementation of existing Programmes**

This leads onto the last issue. Although Agenda 21 engaged with the issue of action to achieve sustainable development, it referred broadly to the issues faced by developing countries. Whilst, the specific difficulties faced by SIDS were identified in the BPOA\textsuperscript{171} much less appears to have been done in terms

\textsuperscript{170} Reference is made to common but differentiated responsibilities in this context in the BPOA Preamble para 14 where reference is made to the special position of SIDS as acknowledged in Agenda 21 chapter 17 section G.

of the development of model provisions. For example, no mention is made in the progress reports and the MSI does not take the matter any further.

However, it is clear that in other areas, legislative mapping tasks have been undertaken. For example, most recently UNESCO has published a report in which reference is made to the mapping of approaches to sustainable development in the South Pacific.\textsuperscript{172} UNESCO has undertaken similar work in relation to intangible cultural heritage legislation and national copyright laws.\textsuperscript{173} NGOs have also been involved in related mapping tasks; for example, the IUCN through TILCEPA have produced a survey of legislation supporting Indigenous conserved areas.\textsuperscript{174}

In terms of the development of model rules, the way forward is less clear as the development of prescriptive rules would not be beneficial. It is necessary for flexibility to be maintained for different states and indeed local communities to choose the approaches that suit their purposes. On the other hand, model provisions in terms of a toolbox of options could be useful. It can be seen that this approach has been taken before in this region. For example, the draft Model Law for the protection of traditional knowledge, innovations, products and practices which establishes traditional cultural rights and provides a framework for exploiting traditional knowledge through contract.\textsuperscript{175}

In summary therefore, there does not appear to be any inherent obstacles to an international project involving the identification and recording of ways in which legal pluralism has been dealt with at the national level and then developing a toolbox of model provisions. By moving beyond the BPOA such

\textsuperscript{172} UNESCO Islands in a Sea of Change - UNESCO’s Intersectoral Platform for SIDS (2009)

an initiative would assist independent states as well as external territories experiencing similar challenges associated with legal pluralism.

VI CONCLUSION

The integration of customary laws in environmental legislation poses a number of issues and challenges. But the legally pluralist nations of the South Pacific region should not face this challenge alone. It has been said that legal pluralism is at once a puzzle, an opportunity and a problem in international society\textsuperscript{176} and one that must be embraced if international environmental law is to fulfil the goal of addressing global environmental concerns. The ‘puzzle’ can only be solved by devoting more resources to identifying and dealing with the complexities involved. It is an issue which deserves greater attention and would benefit from global action. International environmental law must reconcile national self interest with broader public goals and common purposes.\textsuperscript{177} The key is to maintain flexibility but also to avoid fragmentation of approaches to legal pluralism amongst the post-colonial societies of the South Pacific. An international normative agenda can be a driver for solving the issues involved in the recognition of customary law in environmental regulation. International law could play a much greater standard setting role and provide a ‘common normative framework’\textsuperscript{178} to guide legally pluralist nations in dealing with this challenge. There has recently been broad consensus within the international community on Indigenous collective rights as articulated in the DRIP and the need to promote the inclusion of Indigenous peoples in decision-making and the design, implementation and evaluation of law and policy, in the Second International Decade of the World’s Indigenous People. A firm foundation is needed to assist legally pluralist nations in implementing international law and policy and in particular the ways in which customary law can be reconciled.

\textsuperscript{176} David Kennedy, “One, Two, Three, Many Legal Orders: Legal Pluralism and the Cosmopolitan Dream” delivered at the International Law Association, British Branch, University College London and School of Oriental and African Studies, 4 March 2006.

\textsuperscript{178} La Torre ‘Legal Pluralism as Evolutionary Achievement of Community Law’ (1999) 12(2) \textit{Ratio Juris} 182-95.
with state based legislation. It is not suggested that action should only be undertaken at the international level. There is little doubt about the importance of bottom up approaches and the need to create legal space for local communities to flexibly design their own approaches to environmental regulation. Furthermore, there is clearly a need to go beyond the law in assisting legally pluralist states. But the risk is that if international normative action is not taken, the law in this area will remain fragmented and primarily focused upon human rights. What the international community can do is to become much more fully engaged with the specific issue of environmental law and legal pluralism. It has been said that ‘legal pluralism is a doorway’\textsuperscript{179} – if so it is one through which the international community needs to step.

\textsuperscript{179} Kennedy above n 176, 4.
